

BRCA2 · missense penetrance-density profile

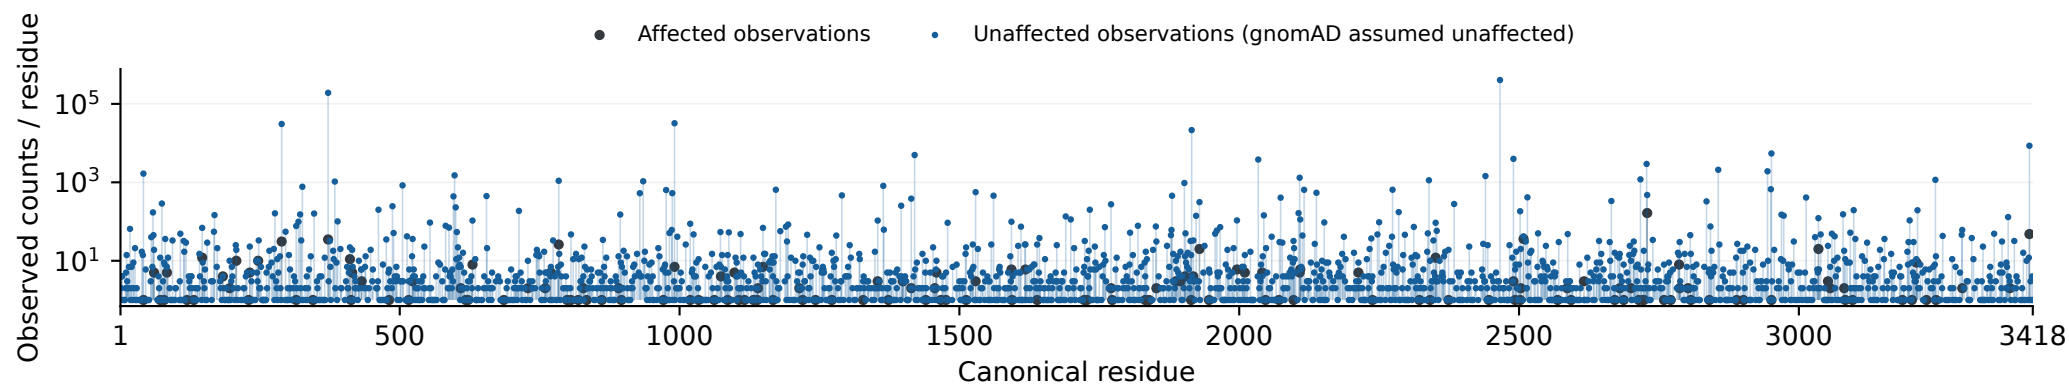

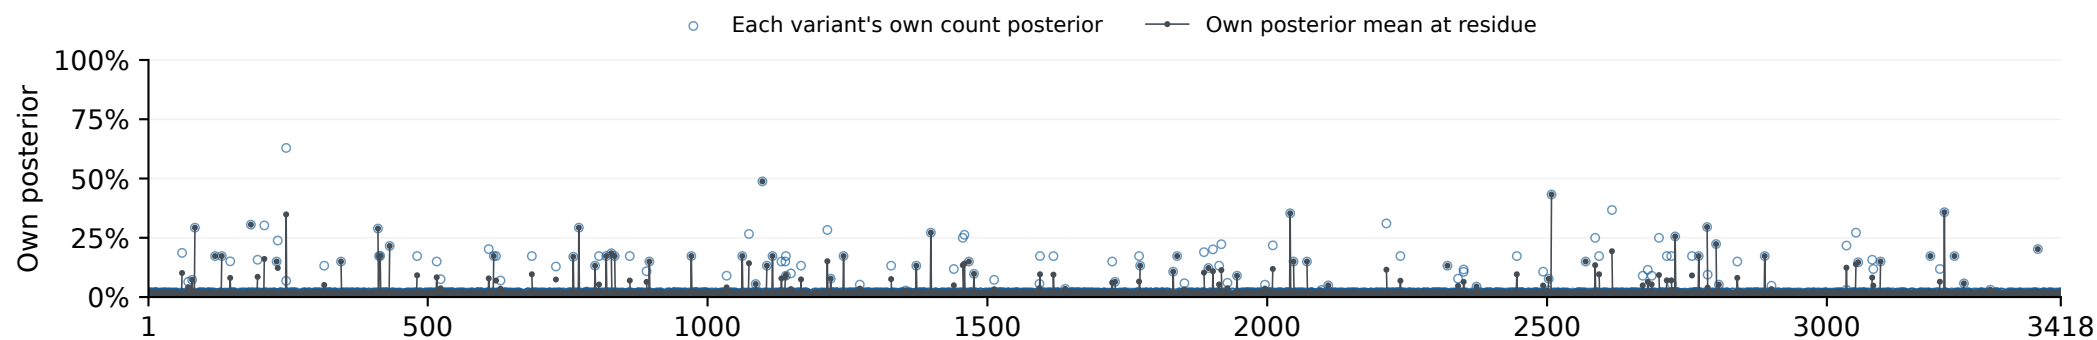

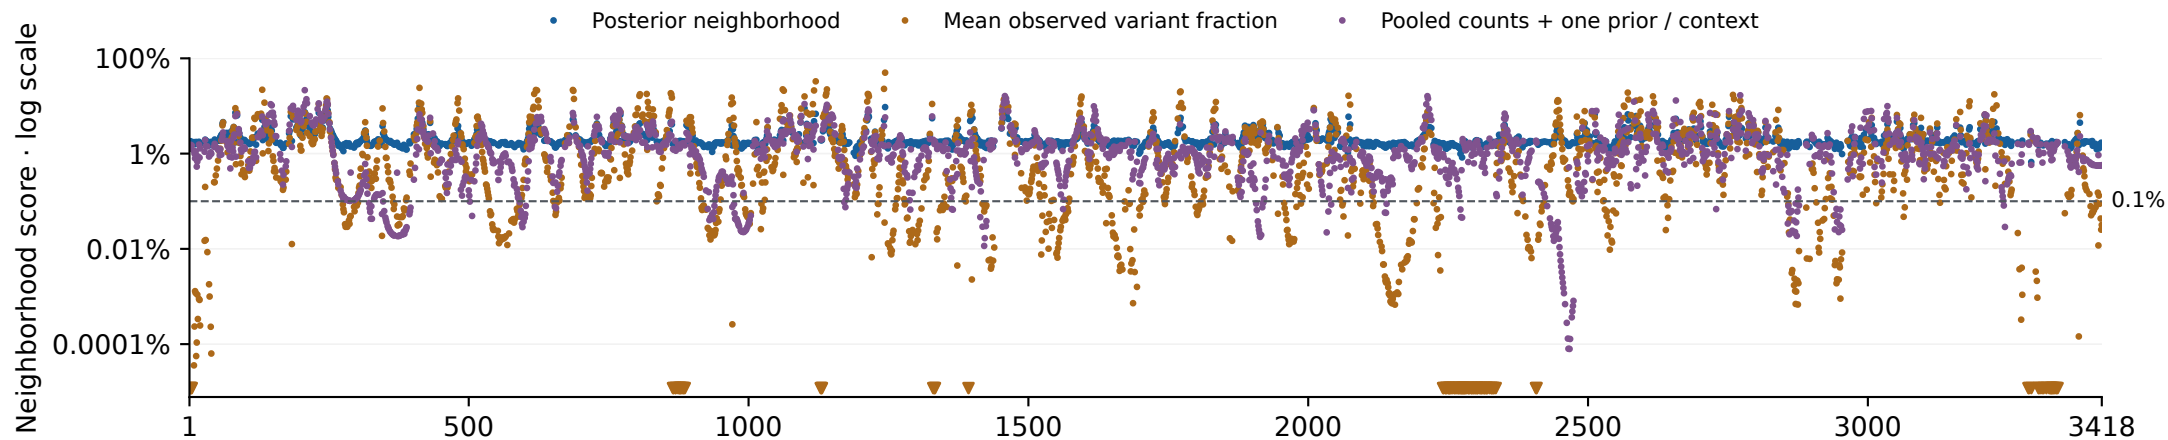

Posterior neighborhood · primary Mean observed variant fraction · diagnostic

BRCA2 · Female breast cancer — verified clinical subset

Prior 2.3% · 2,003/3,418 residues

Canonical residue · track: blue 3D, gold polymer, purple mixed, grey unestimated

Variant-only leave-one-out; same-residue alternatives retained. Half weight at 3 Å; positive tail; same-IDR polymer distances.
Line = mean of supported variant scores; pale band = between-variant range, not uncertainty. Gaps are unestimated.
Log panel: ▼ = exact zero, displayed at 1.19e-05%, below every positive value.
These are descriptive features, not calibrated disease probabilities. Source exclusions are documented in the accompanying report.
