

KCNQ1 · missense penetrance-density profile

Posterior neighborhood · primary Mean observed variant fraction · diagnostic

KCNQ1 · Long QT syndrome type 1

Variant-only leave-one-out; same-residue alternatives retained. Half weight at 3 Å; positive tail; same-IDR polymer distances.
Line = mean of supported variant scores; pale band = between-variant range, not uncertainty. Gaps are unestimated.
Log panel: ▼ = exact zero, displayed at 0.001%, below every positive value.
These are descriptive features, not calibrated disease probabilities. Source exclusions are documented in the accompanying report.
