

LDLR · missense penetrance-density profile

Posterior neighborhood · primary Mean observed variant fraction · diagnostic

LDLR · Familial hypercholesterolemia

Prior 14.8% · 637/860 residues

Variant-only leave-one-out; same-residue alternatives retained. Half weight at 3 Å; positive tail; same-IDR polymer distances.
 Line = mean of supported variant scores; pale band = between-variant range, not uncertainty. Gaps are unestimated.
 Log panel: ▼ = exact zero, displayed at 0.000534%, below every positive value.
 These are descriptive features, not calibrated disease probabilities. Source exclusions are documented in the accompanying report.
